**RESEARCH AND FIELD EXPERIENCE:**

1985-present: Co-Director, Caracol Archaeological Project: Caracol, **Belize**:

2012 Season (Jan-March) involved a staff of 17 and a crew of 15.

Research focused on beginning the 3-year investigation of a Maya "neighborhood" involving some 16 residential groups on the plateau upon which the Machete Terminus sits. The 2012 field season saw the investigation of 5 residential groups on the northern end of the plateau, specifically on: Structures K23, K26, and K31 in "Zumba;" Structures K12, K13, K14, and K29 in "Tango;" Structures K15, K16, K18, K19, and K21 in "Dos Aguadas;" Structures K24, K25, and K26 in "Terraza;" and, Structures L74 and L75 in "Salsa."

2011 Season (Jan-March) involved a staff of 17 and a crew of 26.

Investigations focused on four separate sub-projects. The first sub-project was the continuation of the investigation of the double group comprising Structures F30-F42, focusing on Structures F34, F35, and F38 during 2011. The second sub-project involved contextualizing the archaeological data collected from Structures F30-42 in terms of three neighboring groups; new excavations were undertaken in Structures F3, F9, F11, F14, F24, and the F1 chultun; these data may be combined with the previously excavated Structures F2, F4, and F21. The third subproject involved ground-checking LiDAR data, especially for causeways and reservoirs. The fourth sub-project involved the stabilization of the previously excavated Northeast Acropolis in conjunction with the Belize Institute of Archaeology.

2010 Season (Jan-March) involved a staff of 19 and a crew of 16.

Investigations focused on three separate archaeological programs and began the coordination of stabilization for Caracol's Northeast Acropolis. A continuing focus for 2010 was the Northeast Acropolis with further investigation of Structures B31, B33, and B34 - as well as a deeper plaza probe that found an Early Classic deposit; stabilization of the Northeast Acropolis will start in December 2010 in conjunction with the Institute of Archaeology. A second focus for the 2010 season was the start of a multi-season investigation of a conjoined plaza elite group comprised of Structures F30-F42, looking especially at its latest occupation. Five excavations that revealed multiple deposits were undertaken in 2010. The third focus for the 2010 field season was the beginning of ground-checking the 2009 LiDAR DEM, specifically focusing on caves.

2009 Season (Jan-March) involves a staff of 16 and a crew of 18.

Investigations focused on three separate programs. The first continued investigation of Structure C20 and the excavation of a tomb found during the 2008 field season. The second focus was the beginning of new site mapping using airborne lidar radar to fill in settlement, terraces, causeways, and new termini. The third - and main - focus for the 2009 excavation season was the beginning of a multi-year research program in the Northeast Acropolis to define its physical form and developmental history (especially in relation to the Maya collapse), leading to the eventual stabilization of this complex for tourism.

2008 Season (Jan-March) involved a staff of 13 and a crew of 10.

Investigations focused on two residential groups southeast of the South Acropolis in order to examine ritual variability in living units that are immediately proximate to the epicenter. Excavations in one group focused on two eastern buildings, a central shrine, and the northern and western structures. In the other group, the eastern building contained a looted tomb and the front of the structure was excavated; also dug in this group were the western palace, a line-of-stone building in the plaza, and a northern "out" building.

2007 Season (Jan-March) involved a staff of 12 and a crew of 10.

Investigations focused on Structures A16, B1, D2, and I1 through I8. While the focus began on locating Terminal Classic remains, it changed focus mid-season as hiatus era remains were encountered in Structure D2 and in Structures I2 and I5. Particularly notable were the series of face caches recovered in Structure I5, the majority in association with obsidian eccentrics and other objects. A 17 person film crew for the Discovery Channel (GBR) was on-site for two weeks.

2006 Season (Feb-March) involved a staff of 14 and a crew of 9.

Investigations focused locating Terminal Classic in situ remains. Three loci were selected for excavation: a housemound group at the southeastern edge of the epicenter integrated into the epicentral boundary wall, an isolated epicentral structure north of the A Group ballcourt, and a non-epicentral palace located ca. 500 m northwest of the epicenter. Ceramic remains from all excavated areas dated to the Terminal Classic and included ceramic trade items.

2005 Season (Jan-March) involved a staff of 12 and a crew of 9.

Investigations focused on locating non-palace Terminal Classic occupation associated with small structures in the vicinity of the epicenter. Structure I20 produced a late burial and use-related materials dating to this era; Structure B59 proved to be a later vaulted building with interior stone piers. Structures B40, B42, and B44 yielded a series of tombs, burials, and caches that spanned the Protoclassic to Terminal Classic Periods.

2004 Season (Jan-March) involved a staff of 10 and a crew of 9.

Excavations focused on the small structures immediately east of Barrio and west of Caana in an attempt to identify specific areas that may have been used for a support function for the epicentral elite. These investigations succeeded in recovering Terminal Classic line-of-stone buildings, possible kitchen debris, a Terminal Classic burial, and 3 Early Classic interments.

2003 Season (Feb-April) involved a staff of 13 and a crew of 9.

Excavations focused on the South Acropolis to test for the existence of attached specialists. Four burials were recovered in Structure D9, in-situ trash was recovered from an early version of Structure D5, and a large number of Protoclassic vessels were recovered from a collapsed chultun.

RESEARCH AND FIELD EXPERIENCE (continued):

2002 Season (Feb-March) involved a staff of 12 and a crew of 12.

Excavations focused on the Structures A13, B28, and F4, all of which were trenched; a deep plaza test was also dug in front of Structure B33. A new stela was found in front of Structure B28; cache vessels were recovered from the excavations into Structure A13 and the B33 front plaza. Additionally, a new stucco text was recovered in association with Structure B19. The contents of two tombs were also recovered by the stabilization project.

2001 Season (Jan-March) involved a staff of 14 and a crew of 11.

Excavations focused on the palace structures in Barrio and Caana in preparation for their final stabilization. Structure B26 was trenched and backfilled; Structure B25 was completely cleared; Structure B21 saw some work; Extensive trash deposits were recovered in the Barrio excavations. On Caana, Structure B18 was investigated, the rooms in the NW Quad were completely recorded, and 2 tombs were found at the base of Structure B19.

2000 Season (Jan-April) involved a staff of 13 and a crew of 14.

Excavations focused on the southwest walled area of Caracol, Belize and on a neighboring residential plaza. Mapping concentrated on connecting the Cohune-Chaquistero transect to the main map and in completing a square Kilometer of terraces in the Chaquistero area. The Chaquistero causeway was discovered as a result of this work.

1999 Season (Jan-April) involved a staff of 15 and a crew of 12.

Excavations focused on axial trenching of the basal stairs of Structures A2 and A3, as well as on areal exposure of parts of the frontal stairs and substructures associated with these buildings. A residential group was investigated immediately north of the epicenter. Mapping concentrated on recording an east-west transect 6 kilometers north of the epicenter. A regional museum opened at Caracol in March.

1998 Season (Jan-April) involved a staff of 15 and a crew of 12.

Excavations focused on basal architecture associated with Structures A1, A3, and A8, as well as on a housemound group 500 m north of the A Group, where a collapsed tomb and plaza test were dug. Mapping recorded the Retiro and Ceiba termini and their associated causeways.

1997 Season (Jan-April) involved a staff of 16 and a crew of 12.

Excavations focused on 4 groups with open, collapsed, and looted tombs in the southwest part of Caracol; an additional tomb, 2 caches, and a freestanding stucco statue were excavated in the epicenter; settlement mapping was completed for over 16 km<sup>2</sup> of the site. Approximately 15,000 tourists per year now visit Caracol.

1996 Season (Jan-April) involved a staff of 15 and a crew of 8.

Primarily a laboratory season to get caught up on the cataloguing, recording, and analysis of materials from the northeast settlement program; mapping completed for a 9 km<sup>2</sup> central block; clean-up excavation undertaken in Str. B34 (encountering Preclassic shrine), which was then backfilled.

1995 Season (Feb-June) involved a staff of 24 and crew of 36.

Second season of northeast sector settlement program; intensive excavation of two groups and extensive test-pitting; Preclassic burial associated with ca. 37 vessels and 7000 beads (dating to ca. A.D. 150) found in Str. B34; no drop-off in density found in transects mapped outside the epicenter for 6 km to the north and south; more causeways are located from landsat interpretation (going 24 km to the southeast) ground survey (Hatzcap Ceel causeway; Round Hole Bank causeways); mapping and reconnaissance indicates that the city of Caracol has a radius of 10 km.

1994 Season (Jan-May) involved a staff of 22 and crew of 44.

First of two seasons of National Science Foundation-sponsored northeast sector settlement program; extensive mapping; discovery of Puchituk terminus and causeway; excavations suggest that Caracol core area is occupied well past the last dated monuments in the epicenter.

1993 Season (Feb-June) involved a staff of 20 and crew of 40.

Stabilization continues; investigations on Caana locate a royal tomb dating to A.D. 537 in Str. B20 and deeply Buried ritual deposits in Str. B19; hieroglyphic texts are found in non-elite contexts.

1992 Season (Feb-June) involved 15 staff and a crew of 40.

Stabilization continues; discovery of a ruler's tomb in South Acropolis and royal tombs in the Central Acropolis; together with associated caches, these finds indicated shared ritual patterns throughout the Caracol population; GOB builds all-weather road into site.

1991 Season (Jan-June) involved 19 staff and a crew of 85.

Stabilization continues; causeway system of Caracol is found to extend out 7 to 8 km in three instances; jadeite mask and mercury found in a stone box cache in Str. A6; intact stucco roof frieze is found within Caana; GOB declares whole of Caracol area a national park.

1990 Season (Jan-June) involved 15 staff and a crew of 75.

Stabilization continues; excavations uncover a tomb in Str. A7 and numerous caches in Strs. A2 and A8; South Acropolis found to have a major Early Classic phase.

1989 Season (Jan-July) involved 15 staff and a crew of 85.

Second season of southeast sector settlement work; majority of agricultural fields, houses, and causeways/termini prove to be a post-war phenomena associated with increased prosperity at all levels of society; beginning of USAID and GOB funding for stabilization; discovery of Altar 23 and the warlike nature (building-burning and stone points) of Caracol in the Terminal Classic; found that Caana, Caracol's largest architectural complex, was rebuilt post-A.D. 800.

1988 Season (Feb-May) involved a staff of 11 with a crew of 25.

First season of Guggenheim-sponsored southeast sector settlement research; recognition that population increase and building boom directly follows Tikal and Naranjo wars.

RESEARCH AND FIELD EXPERIENCE (continued):

- 1987 Season (Feb-April) involved a staff of 11 with a crew of 20.  
Initiation of settlement research; realization that tombs are located throughout the site; causeways discovered to extend 3 to 4 km distant from epicenter.
- 1986 Season (Jan-June) involved a staff of 14 with a crew of 40.  
Discovery of Altar 21 which records Caracol's defeat of Tikal in war; intact painted tomb of a royal woman, dating to A.D. 634, investigated at Caana; two other intact tombs with painted capstones also excavated.
- 1985 Season (Jan-April) involved a staff of 12 with a crew of 30.  
First full field season; camp building started; cache found in Str. A6; three looted tombs (two painted) investigated in Str. B20; one looted tomb investigated in Str. A37.
- 1983 (August) and 1984 (January) - preliminary visits to Caracol.
- 1983 - 1985: Project Director, Corozal Postclassic Project: Santa Rita Corozal, **Belize**, Ph. II (NSF-sponsored program to look at Late Postclassic social, political, religious, and spatial organization):  
1985 Season (May-August) involved a staff of 15 with a crew of 35.  
1984 Season (May-August) involved a staff of 16 with a crew of 32.
- 1979 - 1982: Project Director, Corozal Postclassic Project: Santa Rita Corozal, **Belize**, Ph. I (Dissertation research undertaken by myself with A.F. Chase as Field Director designed to define the Maya Postclassic era in northern Belize):  
1981 Laboratory Season (May-August) involved a staff of 3.  
1980 Season (May-August) involved a staff of 10 with a crew of 25.  
1979 Season (May-August) involved a staff of 8 with a crew of 21.
- 1979 May-Jun: Project Director, Corozal Postclassic Project: Nohmul, **Belize**; 4 staff and 11 crew.
- 1978 May-Jy: Co-Director with A.F. Chase of excavations at Nohmul and Orange Walk, Belize in conjunction with N. Hammond's Corozal Project, **Belize**.
- 1978: Analysis of Burkitt Skeletal Collection from the Guatemalan Highlands, Anthropology Department, University Museum, University of Pennsylvania.
- 1977 - Fall: Assistant Archivist for the Copan Project, Honduras, directed by C. Baudez - with A.F. Chase and Archivist J. Sweeney.
- 1977 May-Ag: Survey and reconnaissance in the Tayasal-Paxcaman Zone, Peten, **Guatemala** and preliminary analysis of the ceramics, artifacts, and skeletal material from the University Museum 1971 excavations.
- 1977 Jan-My: Field Supervisor at the University Museum excavations at Quirigua, Izabal, **Guatemala** under the direction of R. Sharer, involving excavation of complex architectural stratigraphy in Structure 1A-10 and in the Great Plaza.
- 1976 May-Ag: Field Supervisor at Tinicum Project Excavations, **Pennsylvania** under the guidance of M. Becker, involving excavation of the 17th century Princehoff site and direction of 6 students.
- 1975 June-Jy: Archaeological Consultant for the Stenton Mansion Project, Philadelphia, **Pennsylvania**; under the direction of J. Kenyon, University Museum.
- 1974 - Fall: Analysis of Tikal small mammal bones.
- 1974 May-Ag: Excavator for the State Archaeologist of **Delaware** at various prehistoric and historic sites.

FELLOWSHIPS AND GRANTS (RESEARCH-RELATED):
